

Absolutely. I'd keep the **news flashes exactly as structured**, but make the market much more volatile. That way a trader can realistically make or lose a large portion of their portfolio depending on how they interpret the information.

I've introduced **20%, 25% and 30% moves**, while still keeping smaller movements in the market so not every stock behaves wildly every round.

BULLS & BEARS — FINAL MARKET PLAN

Starting Market — Round 0

#	Stock	Ticker	Starting Price

ROUND 1 — THE TECH SURGE

News Flash

1. A global shortage of advanced computing components pushes several technology companies to secure long-term semiconductor supply agreements.
2. Major cloud providers announce a wave of new AI infrastructure projects across North America and Asia.
3. Digital advertising spending jumps sharply as businesses increase their online marketing budgets.
4. A proposal to reduce financial incentives for electric vehicle purchases creates uncertainty across the automotive industry.
5. Retailers report significantly stronger online sales during the latest shopping period.
6. A major shift toward premium athletic products is reported among younger consumers.

ROUND 2 — THE SHOCK

News Flash

1. A sudden escalation in international tensions sends energy markets sharply higher as traders reassess global supply risks.

2. A major central bank signals that interest rates may remain elevated for considerably longer than previously expected.
3. Several large infrastructure projects are delayed following unexpected increases in financing and material costs.
4. Airlines warn that rising operating costs could put significant pressure on margins over the coming quarters.
5. Demand for preventative healthcare services rises sharply following a new industry-wide report.
6. Global automotive manufacturers report unexpected disruptions across several key supply chains.

MARKET EXPANSION

Immediately after the Round 2 news flash:

MARKET UPDATE

10 NEW STOCKS HAVE ENTERED THE MARKET.

Traders now have access to a wider range of companies and new opportunities.

The new stocks are available for trading immediately.

New Stocks

#	Stock	Ticker	Entry Price
21	TSMC	TSM	\$200
22	Broadcom	AVGO	\$300
23	Oracle	ORCL	\$250
24	Netflix	NFLX	\$1,100
25	Lockheed Martin	LMT	\$550
26	GE Aerospace	GE	\$300
27	ConocoPhillips	COP	\$100
28	McDonald's	MCD	\$330
29	Disney	DIS	\$120
30	Linde	LIN	\$500

These 10 stocks become tradable immediately during the remaining Round 2 trading window.

ROUND 3 — THE INFRASTRUCTURE RACE

News Flash

- 1.** A wave of new data-centre projects is announced across several major technology markets, with construction expected to begin immediately.
- 2.** Governments announce substantial incentives aimed at expanding domestic semiconductor manufacturing.
- 3.** Global advertising expenditure reaches a new high as companies increase spending across digital platforms.
- 4.** A major infrastructure programme receives accelerated approval, bringing forward billions in planned construction spending.
- 5.** Governments announce new measures aimed at rapidly increasing renewable energy investment.
- 6.** Healthcare companies report stronger-than-expected demand for long-term treatment and preventative services.

ROUND 4 — THE RATE RESET

 **News Flash**

1. New economic data causes markets to dramatically reassess expectations surrounding future interest-rate decisions.
2. Consumer spending remains stronger than expected despite tighter financial conditions.
3. New technology regulations are introduced across several major markets, increasing compliance requirements for large technology companies.
4. Global industrial demand slows unexpectedly, putting pressure on several commodity markets.
5. A major healthcare policy proposal introduces significant changes to pharmaceutical pricing and healthcare coverage.
6. Cross-border digital commerce accelerates as businesses increasingly move their payments online.

ROUND 5 — THE FINAL MOVE

News Flash

1. Demand for advanced AI infrastructure accelerates sharply as several major companies announce significantly larger technology budgets.
2. Semiconductor manufacturers report a sudden increase in orders for advanced chips and high-performance computing components.
3. Governments announce increased long-term defence spending following a reassessment of national security requirements.

4. A surge in global energy production puts significant downward pressure on crude prices.
5. Streaming and digital entertainment usage reaches a new high as consumers shift further toward online platforms.
6. Demand for industrial materials rises sharply as major infrastructure projects move into their construction phase.

LIN	—	—	—	500.00	600.00	522.00	657.72

The volatility profile now looks much better

You have some relatively small movements like **+3%, -4%, +6%**, but also genuine event-driven shocks of **±20%, ±25% and ±30%**.

That creates some very interesting situations:

- A trader can be **up massively after one round and get crushed in the next.**
- Diversification actually matters.
- Holding cash becomes a strategic decision.
- Scarce 100-share stocks become valuable for negotiations.
- The introduction of 10 new stocks can completely change the market.
- A player who correctly anticipates a **+30% move** can make a huge jump.
- Someone heavily concentrated in a stock hit by **-30%** can lose a huge portion of their portfolio.

Most importantly, the **news doesn't say "tech stocks will rise" or "oil stocks will fall."**

Participants have to interpret the information themselves, which is what makes the simulation feel like an actual trading competition.
